

PROFESSIONAL SUMMARY

DevOps and Cloud Engineer with 3 years' experience leading the delivery of enterprise platforms for global clients. Led DevOps delivery for two KONE IT services platforms, a multi-country order placement system and a role-based user management platform, engineering the APIs, CI/CD pipelines, and production observability behind them. Specializes in integrating generative AI and LLM services (AWS Bedrock, SageMaker) into real production workflows, backed by an MSc in Cloud Computing and a Minor in AI & Data Science from CCE, IIT Mandi.

TECHNICAL SKILLS & CERTIFICATION

Cloud & DevOps: AWS (EC2, S3, Lambda, DynamoDB, ECS), Terraform, Docker, CI/CD

AI & Machine Learning: LLM Integration, Generative AI, AWS Bedrock & SageMaker, NLP Workflows, Model Evaluation, Hyperparameter Tuning, Structured/Unstructured Data Processing

Programming Languages & Frameworks: Python, Django, Flask, SQLAlchemy, JavaScript, React, REST APIs

Testing & Monitoring: Datadog, CloudWatch, Postman, Playwright, Pylint, SonarCloud.

Databases & Systems: PostgreSQL, MySQL, SQL ETL Optimization, Bash/Shell, DNS, VPN, Active Directory

Delivery & Collaboration: Git (GitHub, Bitbucket), Jira, Agile, Code Reviews, Release Documentation

Certifications: Software Development (.Net and React); AWS Cloud Practitioner; Appian Associate Developer.

WORK EXPERIENCE

Associate Technical Consultant, WNS Vuram Technologies India

Jul 2021 – Aug 2023

- Developed the order placement platform to handle country-specific ordering workflows (e.g., Finland vs. China) through a single unified form, absorbing regional process variation without fragmenting the codebase.
- Delivered role-based access control for the user management platform: pooled users, admin tiers, and competency-based permissions governing who could access what across the client's organization.
- Built the Django REST API services powering both platforms, country-specific order routing, and role-based access (pooled-user, admin, competency permissions), with structured error handling that reduced average API latency by 20%.
- Enhanced production monitoring with Datadog and CloudWatch, achieving 15% faster incident resolution and reducing operational downtime across release cycles.
- Delivered low-code Appian enhancements for Plan SA's land-acquisition system, improving workflow throughput by 25% for 10 users managing land records.

Developer-Intern, Tata Consultancy Services India

May 2021 – Jul 2021

- Developed computer-vision features in Python for AIG, detecting user experience via facial-expression analysis, improving prediction accuracy by 15% & test coverage by 25%, and reducing UAT bug rates before release.

PROJECTS

BankSpec AI | AI Copilot for Banking Requirements & Test Generation | 2026

- Built and deployed an AI system that extracts structured requirements from banking documents (Claude API, each grounded in a source citation to prevent hallucination) and auto-generates positive, negative, boundary, and authorization pytest cases, catching real defects including an authorization-bypass where one customer's token could modify another's card.
- Engineered production-grade AI governance: human-in-the-loop approval before any test executes, PII scanning on ingest, and a full audit trail of every model call, prompt version, and approval decision.
- Tools Used:** Python, Claude API, Streamlit, pytest, REST APIs.

ECS Migration Lab | Personal Project | Jul 2026 - In Progress

- Containerised and migrated a Django application to AWS ECS using Terraform-provisioned infrastructure, GitHub Actions deployment, and CloudWatch/Datadog observability monitoring.
- Tools Used:** Django, AWS ECS, Terraform, GitHub Actions, CloudWatch, Datadog

EDUCATION

Indian Institute of Technology (IIT, Mandi), Minor in AI and Data Science

Jun 2025 – May 2026

National College of Ireland, Dublin, MSc in Cloud Computing (2.1 Honours)

Sep 2023 – Nov 2024

Anna University, Chennai, BE in Computer Science (8.13 CGPA)

Aug 2018 – May 2022
